What We Do ?

Making Data Science & AI explainable, provable, and transparent

Produce more explainable models, while maintaining a high prediction accuracy.

Training the AI systems with right data

Making systems which are trained to tame the bias.

Designed to ensure there is no compromise of users' data security and confidentiality

Enable business users to understand, appropriately trust, and effectively manage the data for AI.

Investing in Design methodologies

Using next generation Data Science algorithms like “Transfer Learning” and “Active Learning”.

Methodology

Business Understanding

Translating business objectives into data science problems.

Data Understanding

Collecting and exploring data to assess quality, gain insights, and form hypotheses.

Data Preparation

Preparing raw data into the final dataset.

Modeling

Selecting and applying models, with possible iterations to data preparation.

Evaluation

Testing models for generalization and business fit to select the champion model.

Deployment

Deploying the model to process new data and solve the business problem.
